```
The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                t 6

This sequence represents CDNA encoding an Arabidopsis thaliana

CC gibberellin (GA) 2-oxidase, PcGA20x2. This enzyme is a GA 2-beta-

CC dibberellin (GA) 2-oxidase, PcGA20x2. This enzyme is a GA 2-beta-

CC dibberellin (GA) 2-oxidase, profact, and is the most important route for

its only activity. Hydroxylation at the 2-beta position of a GA results

CC Am entabolism in plants, ensuring that the active hormones do not

CC GA metabolism in plants, ensuring that the active hormones do not

CC commulate in plant tissues. The nucleic acids can be used to transform

CC accumulate in plant tissues. The nucleic acids can be used to transform

CC contemplate of reduce the concentration of bloactive GAS in the

CC or otherwise enhanced to reduce the concentration of bloactive GAS in the

CC plants and therefore to inhibit plant growth. Growth inhibition is useful

CC plants and infereasing yield in Cereals, improving seedling

CC lodging-resistence and grain yield in Cereals, improving seedling

CC quality, reducing the growth of amenity grasses, reducing shoot growth in

CC corchard and onnamental trees, improving tolerance to cold, drought and

CC infection, and increasing yields (by the diversion of assimilates from

CC corchard and ornamental trees, improving tolerance to cold, drought and

CC infection, and increasing yields (by the diversion in floral organs),

CC inhibit reversibility in the development or gerwintation of seeds and

CC reduce shoot growth in commercial wood species. Antisense constructs of

CC inhibit reversibility in the development or gerwintation of geeds and

CC reduce shoot growth in commercial wood species. Antisense

CC improve skin texture and fruit shape in apples, increase stem

CC length and therefore yield in sugar cane, increase stem

CC length and therefore yield in sugar cane, increase stem

CC length and therefore yield in sugar cane, increase growth in woody species

3-beta hydroxylase, Riboflavin specific deaminase, Ethylene response factor, Acyl-CoA thioesterase II, ABC transporter GCN20-like, P-GA thioesterase II, ABC transporter GCN20-like, P-GA transporter.

Sylvoprotein I, P-GJYCOPTOTEN ABC transporter and MRP4 ABC transporter.

HYMDR2, ABC transporter, PMP10 ABC transporter and MRP4 ABC transporter.

The nucleic acid fragments may be used to create transgenic plants where the polypeptides are present at higher or lower levels than normal or in cell types or in developmental stages in which they are not normally found. The polynucleotides can be used as probes for genetically and plysically mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as restriction fragment length polymorphism (RFLP). It can also be used to probe Southern blots containing restriction endonuclease-treated genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross.

The nucleic acid fragments may also be used trom the mutation probbes against PCR amplification products generated from the mutation problation using the mutation tag sequence primer in conjunction with an arbitrary genomic site primer. The peptides can also be used to immunise animals to produce polyclonal or monoclonal antibodies with specificity for peptides or produce polyclonal or monoclonal attuin cells or in vitro in cell for detecting the polypeptides in altu in cells or in vitro in cell cextracts. The present sequence encodes a plant metabolism protein (or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                fragment).

New isolated GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate synthase nucleic acid and proteins, useful for creating transgenic plants where polypeptides are present at higher or lower levels.
```

P-PSDB; ADM94206

The invention relates to an isolated polynucleotide comprising a nucleotide sequence encoding a polypeptide having GTP cyclohydrolase incleotide sequence encoding a polypeptide having GTP cyclohydrolase [1/3,4-dihydroxy-2-butanone-4-phosphate synthase activity, appearing a coll with the comprising the polynucleotide operably linked to at least one regulatory sequence, transforming a cell with the polynucleotide a cell comprising the recombinant DNA construct.

The comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct. Also disclosed as new are nucleic acid the recombinant DNA construct. Also disclosed as new are nucleic acid the recombinant DNA construct. Also disclosed as new are nucleic acid the recombinant DNA construct. Also disclosed as new are nucleic acid consent and assembled contigs encoding plant metabolism proteins chosen from GTP cyclohydrolase (11/3,4-dihydroxy-2-butanone-4-phosphate (ECC (CDNA)) fragments and assembled contigs encoding plant metabolism proteins chosen from GTP cyclohydrolase (11/3,4-dihydroxy-2-butanone-4-phosphate (ECC (CDNA) thicesterase [11,360 transporter GC (GDNA) thicesterase are present at higher or lower levels than normal or in developmental stages in which they are not normally cell types or in developmental stages in which they are not normally collypseticals are present at higher or lower level as restriction fragment and progeny of a defined genetic cross containing restriction endomoleas Example 3; SEQ ID NO 5; 186pp; English fragment)

Sequence 1365 BP; 448 A; 258 C; 244 G; 415 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a gibberellic acid 2-oxidase 2 protein sequence, which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels gibberellic acid levels methods for the inhibition and controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts subpresses the gibberellin biosynthetic pathway substrates or products. The methods uses copally diphosphate synthase, 3beta-hydroxylase, coxidase, phytoene synthase, C.20 oxidase, and a 2beta, 3beta-hydroxylase polynuclectides to achieve this. The method is used to control seed germination and seedling growth especially to regulate gene products of germination, in transgenic plants. The plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ||||||||||:::||||||||:::

                                                                                                                                                                                                                                                                                                                                          The invention relates to control of gibberellin (GA) levels in plants.

The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in agricultural production so that unfavorable environmental conditions normally reducing agronomic output can be avoided and yields increased. Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, etc., and is also useful in storage and transport of seeds to reduce the present sequence is soybean GA 2-oxidase 2 cDNA seeds. The present sequence is soybean GA 2-oxidase 2 cDNA

The invention relates to a DNA encoding a plant protein having applerellin 2-oxidation activity, comprising ADK000079 or ADK00081 or a DNA encoding a protein comprising ADK000800. ADK00082, where one or more amino acid residues are substituted, deleted, added, and/or inserted or DNA hybridising to ADK00079 or ADK00081 under stringent conditions. The DNA is also selected from an antisense RNA, a DNA encoding an RNA having the ribozyme activity that specifically cleaves the transcript of the DNA above, a DNA encoding an RNA that suppresses the expression of the DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New DNA encoding plant-derived proteins having gibberellin 2-oxidation activity, useful for the inactivation of plant gibberellins and plants whose gibberellin activity has been modified by regulating the expression
                                                                                                                                             TACTTTGGAGGCCACCGTTAGCACAGAGGTTGCACCATTGCCACAGCTGCTGGGGAG

                                                     involved in plant resistance or response to pathogenic infection. Mi comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. Mill is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         459

Sakamoto

above in plant cells via RNAi, or a DNA encoding an RNA that suppresses the expression of the DNA above in plant cells by co-suppression. Also included are a protein encoded by the DNA above, a vector harbouring a DNA selected above, a transformed plant cell harbouring the DNA above or the vector, a transgenic plant comprising the transformed plant cell or the vector, a transgenic plant comprising the transformed plant cell or the vector, a transgenic plant, a method of producing a transgenic plant, a method of suppressor comprising the DNA above as an active plant, a method of suppressing plant growth and a method of promoting plant growth. The gibberellin 2-oxidase catalyses the conversion of gibberellin A20 to gibberellin A29, which is further metabolised to gibberellin A29-catabolite. The DNAs are useful in the inactivation of plant gibberellins and plants whose gibberellin activity has been modified by regulating the expression of these DNAs. The present encodes gibberellin 2-oxidase, OsGA2ox3 sequence 8

The invention further comprises antisense RNA sequences, a vector, transformed plant cells, antibodies and proteins, all related to the novel plant DNA sequences of the invention. The novel DNA is preferably derived from a rice-genome database. The invention further provides a method for determining the transcription regulatory regions of the rice genome. The novel DNA is useful for controlling the expression of a gene in a plant and for producing a modified plant with desired and different characteristics. The plant DNA and method enables the acquisition of many

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   606
transcriptional-regulatory regions. This polynucleotide represents a DNA sequence taken from a rice genome clone library for use in the invention. Note: This sequence is not shown in the specification. It has been retrieved from a sequence listing in electronic format from the Japanese Patent Office. The invention claims DNA sequences of SEQ ID Nos 1 to however, the sequence listing only provided the DNA sequences of SEQ ID Nos 1 to Nos 1 to 3032.
                                                                                                                                                                                                                                                                                                                                                                                59

Also included are a vector comprising the polynucleotide, a recombinant DNA construct comprising the polynucleotide operably linked to at least one regulatory sequence, transforming a cell with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Orozco EM, Miao G, Famodu OO;

producing a plant (comprising transforming a plant cell with the producing a plant (comprising transforming a plant from the transformed plant cell), a plant comprising the recombinant DNA construct, Also disclosed as new are nucleic acid the recombinant DNA construct. Also disclosed as new are nucleic acid chosen from GTP cyclohydrolase II/3,4-dihydroxy-2-butenone-4-phosphate consent from GTP cyclohydrolase II/3,4-dihydroxy-2-butenone-4-phosphate cynthase, Dioxygenase, Ent-Kaurene Synthase, Gibberellin CC 3-beta hydroxylase, Riboflavin specific deaminase, Ethylene response factor, Acyl-Cob, thiosesterase II, ABC transporter GRADG-like, P-Glycoprotein I, P-Glycoprotein 3, P-Glycoprotein AFGF, P-Glycoprotein I, P-Glycoprotein 3, P-Glycoprotein AFGF, P-Glycoprotein I, P-Glycoprotein ABC transporter and MRP4 ABC transporter. The nucleic acid fragments are present at higher or lower levels than normally collicity and pypeptides are present at higher or lower levels than normally collicity and pypylacically mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as restriction fragment length collymorphism (RELP). It can also be used as restriction fragment length containing restriction endonuclease-treated genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross. The nucleic acid fragments may also be used as hybridisation probes against PCR amplification products generated from the mutation population using the mutation tag sequence primer; The peptidides can also be used to immuniae animals to produce anythy and produce anythy any produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     using the mutation tag sequence primer in conjunction with an arbitrary genomic site primer. The peptides can also be used to immunise animals to produce polyclonal or monoclonal antibodies with specificity for peptides or proteins comprising the amino acid sequences. Antibodies are useful for detecting the polypeptides in situ in cells or in vitro in cell extracts. The present sequence encodes a plant metabolism protein (or
        comprising the recombinant DNA construct

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                               1 MVVLSQPALNOFFLLKPFKS......AAYTSRLADNRLAPFQKSAA 331

The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out till-length librairies construction: Temple G.
Genoscope members carried out sequencing and annotation: Castelli V., Aury J.W., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.
URGV INRA: Clepet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap. http://www.genoscope.cns.fr/externe/sequences/Banque_Projet_EF/Full
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1058
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 (bases 1 to 1365)

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)
The sequences are based on single pass reads.
Life Technologies (a division of Invitrogen) members carried out
full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation : Castelli
V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C.,
Schachter V., Weissenbach J., Salanoubat M.
URGV INRA : Cleptet C., Caboche M.
Annotation is based on the June 2003 version of the Arabidopsis
genome released by MIPS (Munich Information center for Protein
Sequences). 5 prime and 3 prime are assembled with Phrap.

Submitted (18-NoV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 BVRY codex - FRANCE (8-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length libralise construction : Temple G.

Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Wunich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.
                Castelli, V., Aury, J.M., Jaillon, O., Wincker, P., Clepet, C., Menard, M., Cruaud, C., Quetier, F., Scarpelli, C., Schachter, V., Temple, G., Caboche, M., Weissenbach, J. and Salanoubat, M., Weissenbach, J. and Salanoubat, M. Whole Genome Sequence Comparisons and 'Full-Length' cDNA Sequences: A Combined Approach to Evaluate and Improve Arabidopsis Genome Annotation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AL SUBMILLABORD

AL SUBMILLAG (18-NOV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 EVRV cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
- Web : www.genoscope.cns.fr)

The sequences are based on single pass reads

Life Technologies (a division of Invitrogen) members carried out
full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation : Castelli
V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C.,
Schachter V., Weissenbach J., Salanoubat M.

URGY INRA : Clepet C., Cabocce M.
Annotation is based on the June 2003 version of the Arabidopsis
genome released by MIPS (Munich Information center for Protein
Sequences) 5 prime and 3 prime are assembled with Phrap.

//clone libe "Late Older Blight-Challenged Tubers"
//note="Vector: pBluescript II SK(+) XR; Site I: EcoRI;
Site 2: XhoI; supplier: Pathogen-challenge series. Tubers
from pathogen-free Solanum tubercoum var. Shepody, clone
1756, were inoculated with 5 ul of Phytophthora infestans
(A2-mating type), through 2 puncture wounds 3 cm apart.
The tubers were incubated 1 minute to allow inoculum
absorption. The infection area was outlined for future
collection reference. Surface slices were sampled from the
tubers at 1 day, 5 days, 7 days, 11 days and 14 days
post-infection. All samples were pooled and used for RNA
isolation and library construction. A normalized library
was constructed following a modified protocol of Bonaldo
et al. (1996. Genome Research 6: 791-806)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        362

/notes="Vector: pBlusescript II SK+; Site I: EcoRI; Site_2:
XhoI; The cDNA library was constructed from mRNA isolated
from unexpanded leaves and the shoot tips of 2 week old
seedlings were salt stressed in a solution of 500mM NaCl
for 3 days prior to harvesting. Complementary DNA was
for 1 days prior to harvesting a primer consisting of a
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a XhoI restriction site. EcoRI
adapters were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The cDNA fragments were
directionally cloned into the EcoRI-XhoI restriction site
of the pBluescript vector. The ligated cDNA fragments were
transformed into blub host cells (GibcoBRL). This library
was constructed in the laboratory of Dr. Randy

When it has been determined, an EST from the other end of this

clone is listed in the 'Other ESTs on clone' field. This clone is
available through: Biogenetic Services, 801 32nd Ave. Brookings, SD

877006 USA (phone: 800 423 4163; email: info@biogeneticservices.com)

High quality sequence stop: 426.

/note="Vector: pSPORTI; Site_1: SalI; Site_2: NotI; This cDNA library was constructed_from mRNA isolated from seed coats (100-200mgs) of greenhouse grown plants. The library was prepared using the Life Technologies pSuperScript CDNA library construction kit. Complimentary DNA was synthesized from mRNA using a poly (dT) sequence with a Not I restrictions site. Sal I linkers adapers were ligated to the blunt-ended cDNA fragments followed by Not I digestion. The CDNA fragments were directionally cloned into the Not I sal I restriction site of the pSPORTI vector. The ligated cDNA fragments were
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Email: est@watson.wustl.edu
When it has been determined, an EST from the other end of this
clone is listed in the 'Other ESTs on clone' field. This clone is
